6. Fluconazole is indicated for the treatment of serious infections, including peritonitis, pneumonia, and urinary tract infections, caused by susceptible Candida species.

Application of Fluconazole

Fluconazole is an antifungal medication that is administered orally or intravenously. It is used to treat a variety of fungal infections, especially Candida infections of the mouth, throat, and bloodstream. It is also used to prevent infections in people with weak immune systems, including those with neutropenia due to cancer chemotherapy, transplant patients, and premature babies. Its mechanism of action involves interfering with synthesis of the fungal cell membrane.
